Thank you for specifying Master Lock® locker locks! We want to provide you with the finest possible service and product. Please be sure to provide the requested information with your order. This allows The Master Lock Company to process your order in the most timely manner possible.

1. **Provide the full name, address, and postal code of the school or other ultimate user.** We require this information to register serial numbers and key systems to each specific installation. This enables us, on future orders, to continue with or avoid the key system of record, and it ensures non-duplication of serial numbers already in use. **Failure to provide end-user information will delay processing the order.**
2. **Indicate which key system we are to extend.** Many Master Lock installations use the same lock model but several different key systems. The key system is stamped on control keys and master keys currently in use. If a new key system is required, one different from any now in use at the installation, state your order "furnish new key system."
3. **Most of Master Lock built-in combination locks have two model numbers; one for locker door hinged on the right as you face the doors, and one for left hinged doors.** For example, the Master No. 1630 mounts only on right hinged doors, while Master No. 1631 can be used only on doors hinged on the left. Be certain to check your application and specify the correct lock model for the lockers involved. This will avoid costly and time-consuming replacements. Since lockers vary in styles and design, your Master Lock Representative is available to assist in determining the correct lock to be used on your particular application.
4. **Replacement Control Charts: Replacement, hard-copy control charts are available at a \$50.00 net price per individual chart request.**

ADA Lock Solutions

ADA COMPLIANCE DEFINED

The Master Lock® 1600 ADA Series and 1700 ADA Series Built-in Locks meet the United States Department of Justice "2010 ADA Standards for Accessible Design". This Standard requires 5% of lockers meet ADA specifications. In addition, these standards state that operable parts, the lockings, meet the following requirements:

- Shall be operable with one hand
- Shall not require tight grasping, pinching, or twisting of the wrist to operate
- Shall have a force required to activate of 5 lbf (22.2N) maximum

Master Lock ADA Compliant Locker Locks achieve these requirements through the use of a specially designed keyhead and the simple operation of the lock. The large flat keyhead makes the key easy to grip for those with extreme joint pain. For those with clenched fist dexterity, the flat keyhead fits securely between their fingers. The operation of the lock can be achieved by a simple bumping action to the ADA keyhead to both open and close the lock without the need of tight grasping, pinching, or twisting of the wrist.

Many of these locks are already in use in the field for ADA applications.

As needs and requirements vary, please consult the local authority regarding use of any of these locks for a specific application.

BlockGuard® Anti-Shim Padlock Technology

Advances Padlock Security to the Next Level.

Leading the market with innovative security solutions, Master Lock® offers the patented BlockGuard® Anti-Shim Technology – the very best in shim deterrence for combination padlocks.

These enhanced combination locks deter shimming, a method of violating a lock by inserting a specially designed shim tool into its latch mechanism. BlockGuard® has unique flat latch technology that actually blocks typical shim tools from opening the lock – deterring break-ins.

Master Lock exclusive BlockGuard® Anti-Shim Technology (U.S. Patent No. 8,099,985) is now available on Models 1502, 1525, 1572, 1585 and 2076.

Wrap Around Latch™ Technology

The Best Lock for Single Point Latch Lockers!

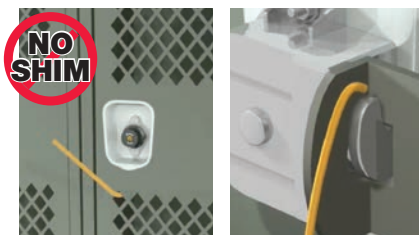

The patented model 1690, 1695MKADA, and 1790 built-in locks use the same technology as an automotive door lock system, utilizing slam shut operation combined with a rotating latch that wraps around the latch plate. Designed for Single Point Latch Lockers, these locks provide the most robust design and requires the least adjustment for proper operation (U.S. Patent No. 7,984,630).

Latch Wraps Around The Latch Plate

Less Maintenance, More Security, Easy-To-Use

EXTREMELY SHIM RESISTANT

Even in the case of ventilated lockers the 1690/1790 hold strong as the Wrap Around Latch™ prevents the use of shims and similar techniques for opening the door. Dead bolt latch automatically locks in position once the locker door is shut, preventing defeating the lock through attempts to move or shim the lock.

INCREASED HORIZONTAL TOLERANCE

A wider operating range reduces the need for call backs or future maintenance adjustments. This saves your facility time and money. The 1690 design offers a much wider operating range.

Lock Bumping –

Lock Bumping has become a legitimate security threat as information on the topic has become widely exposed in the news media and on the internet.

In response to this threat, The Master Lock Company developed exclusive patent-pending BumpStop® Advanced Technology that prevents the transfer of force from the bump key to the pins and blocks rotation of the cylinder. With a reverse rake tapered driver pin, high performance spring and precision tolerance chamber, our 4, 5 and 6-pin BumpStop® products resist bump attacks.

Keying Options

- **Keyed Alike (KA)** - This provides insame keyin convenience and eliminates the need for multiple keys where numerous padlocks are used. All padlocks in the set are keyed the same. Most Master Lock padlocks can be ordered keyed alike. Keyed alike padlocks are listed in this price book with a "KA" suffix in the product number.
- **Master Keyed (MK)** - In a master keyed system, the master key opens all locks in the system although each lock has its own unique key. Master keyed items are ideal for permitting supervisory or emergency access. Master keyed padlocks are listed in this price book with an "MK" suffix in the product number.
- **Rekeyable Padlocks** - Padlock cylinders can be removed and replaced to restore security quickly without requiring a new padlock. This is ideal for situations where keys are lost or stolen due to theft or employee turnover. Rekeyable padlocks are found on pages 27-28.
- **Reserved Key Systems (RSV)** - Reserved key padlocks are not available to the general public and are not listed in this price book. Key blanks and cut keys are supplied directly by Master Lock through distributors and dealers when requested by registered end users. This adds security through the restricted distribution of duplicate keys. This option requires a custom quotation (see page 1).
- **Edge® Key Control** - Keys for this patent pending key control product offer the ultimate protection against unauthorized duplicate keys. Blank keys are available to locksmiths only and controlled by contract. These keys are recommended for all master keys applications. Contact your local locksmith for full details.
- **Non-Removable Key (NR)** - The key cannot be removed from the padlock when the padlock is open. This helps prevent users from accidentally leaving the padlock in the open position. Only selected padlocks offer this option.

KEY CHARTING

- Customers can benefit fully from the large Master Lock change key ranges by having us chart your keying system for you. We will keep a complete record of the progressive key codes assigned and manufactured into your padlocks for each order. You will be assured that there is no unwanted key duplication with the padlocks you purchase over time. Be sure to request this special service with your next order so that all locks purchased from that point forward will be manufactured to comply with your key system requirements. Any orders placed by an end user or distributor should note that they are on a key charting system or reference their End User I.D. Number.
