Finishes

Although we apply the finest available protective plating and/or enamel coating to the surface of our products, these finishes have limitations and in time may deteriorate either from exposure to weather, pollution, perspiration, extremes of climate, frequency of use or other factors. Deterioration of these finishes is, therefore, not a defect, but a normal process which is unavoidable. Our Company cannot accept responsibility for finish deterioration in these circumstances and therefore the finishes cannot be guaranteed. These products will not be refinished or replaced under our warranty should deterioration of finishes occur.

Some finishes are not suggested for areas that are subject to corrosive climate or chemical conditions. We recommend chrome plated or stainless steel finishes for these areas.

ANSI/BHMA FINISH	US NUMBER	DESCRIPTION
605 ¹	US3	Bright Brass - Clear Coated
606	US4	Satin Brass - Clear Coated
613 ²	US10B	Satin Bronze; Dark Oxidized and Oil-Rubbed
619	US15	Satin Nickel
622	-	Matte Black
625	US26	Bright Chromium
626	US26D	Satin Chromium
630	US32D	Satin Stainless Steel
643E	US11	Aged Bronze

1. 605 finish is not recommended for corrosive climates.
2. Oil Rubbed Bronze (613) is considered a category "B" finish by ANSI/BHMA and will vary in color when applied to different alloys and forms of base material. 613 will also vary from production lot and additionally from one manufacturer to another. Oil Rubbed Bronze will wear off over time due to the "rubbed" finishing method that has no protective coating or plating.

Please refer to price columns for each lock series for finish availability.

Marking Cartons

Markings (e.g., door number, stock reference numbers) on individual product cartons will be provided with no charge.¹

1. Keyed and temporary construction cores will be installed in locks and cylinders automatically unless otherwise specified on orders.
2. Construction cores for a given project are keyed alike to one of a limited number of combinations nationwide. Different Falcon projects in the same area using the same or different contractors may use the same key. Where a higher degree of security is desired, order a set of cores in 606 or 626 finish keyed alike to a random combination. Specify "KS1." Such cores are not returnable to Falcon but may be reused for other projects.
3. Temporary construction cores are an inexpensive alternative to interior keyed construction cores. This temporary is intended for use on interior door applications or where security on-site is not a concern.

TEMPORARY CONSTRUCTION CORE PROGRAM (DISPOSABLE)

Temporary construction cores may be ordered with interchangeable core locks and cylinders. These cores may also be ordered separately. Standard payment terms apply.

Features:

- Conveniently fits both 6-pin and 7-pin SFIC applications.
- No keys need to be issued.

STAMPING

CYLINDER AND KEY STAMPING

With these options, keys and/or cylinders are stamped with the key symbol (code). This tells how the cylinder is keyed, eliminating trial and error. Lock mix-ups during installation or key mix-ups afterward are less likely to happen - and easier to straighten out if they do. For example, the symbol AA1 shown in the illustration identifies the lock to be operated by grand master key A, master key AA and change key AA1. Upon written authorization from the building owner to an authorized Falcon distributor, a bitting list can be furnished for each job to translate the symbols into key bittings. If a key is lost, a replacement key can be ordered by number from the Falcon distributor.

Visual key control (VKC) - For greater convenience

The key symbol is stamped on the plug face or other visible portion of the front of the cylinder. This makes identification fast and convenient. The disadvantage is that stolen or lost keys can be easily matched to the locks they operate. Also, restamping cylinders when they are rekeyed results in damage to the finish.

Concealed key control (CKC) - For greater security

For greater security, specify CKC (available for IC core only). The key symbol is stamped in a concealed location, such as the rear of the cylinder or the side of an interchangeable core. It is not visible to the general occupants of the building but can be accessed by authorized personnel upon removal of the cylinder or core.

OVERTUR™ OVERVIEW

Overtur Key System Management is a fully supported, Allegion proprietary software. By leveraging data available in the Overtur digital environment such as interactive floor plans, door schedules, and opening/hardware information, it helps end users and facility managers move from cumbersome methods of designing, assigning, and managing their key system to an easy-to-use, cloud-based system accessible from anywhere.

Complimentary Key System Design features allow users to build and visualize a key system hierarchy and schematic, survey existing conditions, assign and view key symbols, and conduct key meetings while taking notes in the platform. Once your design is complete, the system outputs a printed graphical schematic and a detailed key schedule with configured part numbers. Access to the software includes unlimited users, automated updates, and support.

GENERAL EXIT DEVICE INFORMATION

(Specific to the Falcon 19, 24, and 25 Series exit devices)

All products listed meet ANSI A156.3 Grade 1 standard. Devices will be furnished for hollow metal doors 3'0" x 7'0" x 1-3/4" full flush, with 5/8" high frame stops unless specified otherwise.

DOOR WIDTHS

EXIT DEVICES for door widths exceeding 4'0" are custom applications. Specify the exact door width and consult factory for price and availability. For device widths on narrow stile aluminum and glass doors, consult factory.

DOOR THICKNESS

EXIT DEVICES are furnished at prices listed for door thicknesses of 1-3/4" with standard centerlines. Other door thicknesses and/or offset installations may require additional charges for the device, trim, control and/or strike. Consult factory.

DOOR HEIGHTS/DEVICE CENTERLINE

SURFACE and CONCEALED VERTICAL ROD DEVICES for heights over 7'0" up to 8'0", extension rods are furnished at no additional charge. For heights over 8'0" up to 10'0" extension rods are furnished at prices shown on specific device parts pages. For doors higher than 10'0" or when centerline is other than standard, specify exact height. Consult factory for price.

86 OR 161 DOOR PREPARATIONS

When devices will apply over a 86 or 161 door preparation, consult factory.

DEVICE MOUNTING SCREWS

Machine screws are furnished with Fire Exit Devices. Sheet metal screws are furnished with Panic Devices. Machine screws can be substituted at no additional charge, specify AMS.

SUBSTITUTION OF OUTSIDE TRIM OR STRIKES

When other than standard is desired, deduct price of standard and add price of item used. Check catalog for compatibility. Lever trim is furnished standard Dane. Optional lever designs of Avalon, Quantum, and Sutro are available at no additional charge.

ELECTRIC ACCESSORIES

When specifying Electrical Products, consult catalog or factory to ensure all coordinating accessories have been considered. All electric devices must use respective power supply for warranty to apply.

FACTORS AFFECTING EXIT DEVICES

A Door width

Specify exact door width. This determines what size device is supplied. If door width not specified, 3' is furnished standard.

B Stile width

Determines which series can be used because of the dimension of the active or inactive case. In conjunction with the door width, the width of the device is also affected.

C Door height

Rod lengths and extension rod requirements for surface vertical or concealed vertical rod devices are determined by height.

D Undercut

Bottom rods and bottom latches or bolts for vertical rod applications are affected by the distance between the bottom of the door and the surface to which the strike will apply; 1/4" minimum, 3/4" maximum.

E Thickness

When trim is used with a device it is affected by thickness as is the length of fasteners and cylinders.

F Stop height

The type of strike and affect on backsets is determined by the stop (5/8" standard)

Glass bead

In the case of touch bar devices, Series 19, 24 and 25, glazing bead or trim can interfere with the device requiring shim kits with modified trim and/or device.

Fire labels

As a component of a fire door assembly, exit devices must meet special requirements.

Other

Factors such as transom panels, sill conditions and astragals can affect exit device selection.

Pairs

When devices will occur on paired door leaves, order them together.

Materials

Unusual door or frame materials can affect device selection such as channel iron frames, blade stop frames, hollow core doors and mineral core doors.
